Package configuration

```
                         ┤ Configuring mysql-apt-config ├
 MySQL APT Repo features MySQL Server along with a variety of MySQL components. You may select the appropriate product to choose the version that you wish to receive.

 Once you are satisfied with the configuration then select last option 'Ok' to save the configuration, then run 'apt-get update' to load package list. Advanced users can always change the
 configurations later, depending on their own needs.

 Which MySQL product do you wish to configure?

                              MySQL Server & Cluster (Currently selected: mysql-8.0)
                              MySQL Tools & Connectors (Currently selected: Enabled)
                              MySQL Preview Packages (Currently selected: Disabled)
                              Ok

                                        <Ok>
```

```
